### ■ OPERATING INSTRUCTIONS

Remove any labels or clear protective films from the scale before first use.

### INSTALLING THE BATTERIES

Your scale includes 2 AAA batteries. Insert batteries into the battery compartment situated underneath the scale.

**NOTE:** When "Lo" appears on the display screen, the batteries must be replaced.

### WEIGHING ITEMS

1. Place the scale on a level, hard surface.\*
2. Choose to weigh directly on the glass platform, or use a bowl or glass container for sanitary food handling (see Tare Function).
3. Press the ON/OFF button to turn the scale on. "8888" first appears on the display followed by "0" g, indicating the scale is ready for use.
4. Place the object/food item to be weighed on the platform and read the weight on the LCD screen.

\* A small "o" symbol indicates the scale is level enough for accurate readings.

**NOTES:** Weights are displayed in 1g increments. The scale will read up to 5.2kg, after which "Err" is displayed on the screen. This means the scale is overloaded. Do not touch any parts of the scale with your hands while weighing is in progress. The scale is very sensitive and may pick up extra readings.

### CHANGING MODES

To change from metric (kg/g) to imperial (lbs/oz) mode at anytime during use, press the UNIT button once.

### ■ TARE FUNCTION

#### WEIGHING WITH A BOWL

You may want to weigh ingredients in a bowl or other container. The tare option offsets the weight of the bowl so that you are only weighing the ingredient. If you remove the bowl from the scale, a minus weight (weight of bowl) appears in the display.

1. Place a bowl on the scale platform.
2. Press the ON/OFF button on the front panel. At first "8888" will appear. Wait until "0" appears on the display screen.
3. To tare, press the TARE button once. "0" will appear. Place the ingredient into the bowl. The weight of the added ingredient appears.

### ADD AND WEIGH FEATURE

If you want to reach a desired weight (e.g., 300g flour) – you can use the Add 'n Weigh procedure.

1. Place your scale on a stable, level surface.
2. Press the ON/OFF button. Wait until "0" appears on the display.
3. Place an empty bowl to hold the ingredients on the scale.
4. Zero out the weight of the empty bowl by pressing the TARE button. Wait until "0" appears on the scale. This will ensure that the weight of the empty bowl is subtracted from the total weight of the bowl and ingredients.
5. You are now ready to weigh your first ingredient. Place the ingredient into the bowl until the desired weight appears on the display.
6. You are now ready to weigh the next ingredient(s). Place additional ingredient in the bowl until the desired weight appears on the display.

**NOTE:** If you want to view the weight of individual ingredients as they are added to the bowl, then tare each time you add a new ingredient.

### ■ AUTOMATIC SWITCH OFF

To conserve battery power, the scale automatically shuts off if left unused for approximately one minute. To turn the scale off manually, press and hold the ON/OFF button for two seconds.

### ■ DISPLAY MESSAGES

The Cuisinart® Kitchen Scale provides the following display messages to simplify operation.

**8888** Displays when you switch the scale on. Wait until "0" appears to begin weighing.

**0** Displays when you reset the scale to zero while using the TARE function. Wait until "0" appears to begin weighing. Displays when the scale is ready for use.

**Err** Displays when scale is overloaded. Remove excess weight from the scale.
